

Erasmus+ Coeliac Project – Food & Recipe Tracker

Alex Matthews

C00208942

Oisin Cawley

Project Overview

- Collaborative Project
 - Academia and Clinical practitioners (St Luke's, Seville)
 - Funded by the European Union - 2 year project
 - Cross discipline: Software Development, Games Design, UX/UI Design, Health
- Academic partners: IT Carlow, HvA Amsterdam, FHV Austria, UoS Seville
 - Lead by IT Carlow
- Project Goal:
 - Create an application to help teenagers with coeliac disease comply with their diet
 - Non compliance can cause severe long term symptoms

Project Overview

- Overall application will include:
 - GIP Test Reader
 - Symptom Tracker
 - Educational Quiz
 - Food & Recipe Tracker
- My role is to develop the food & recipe tracker
 - Shared database and API

Technologies

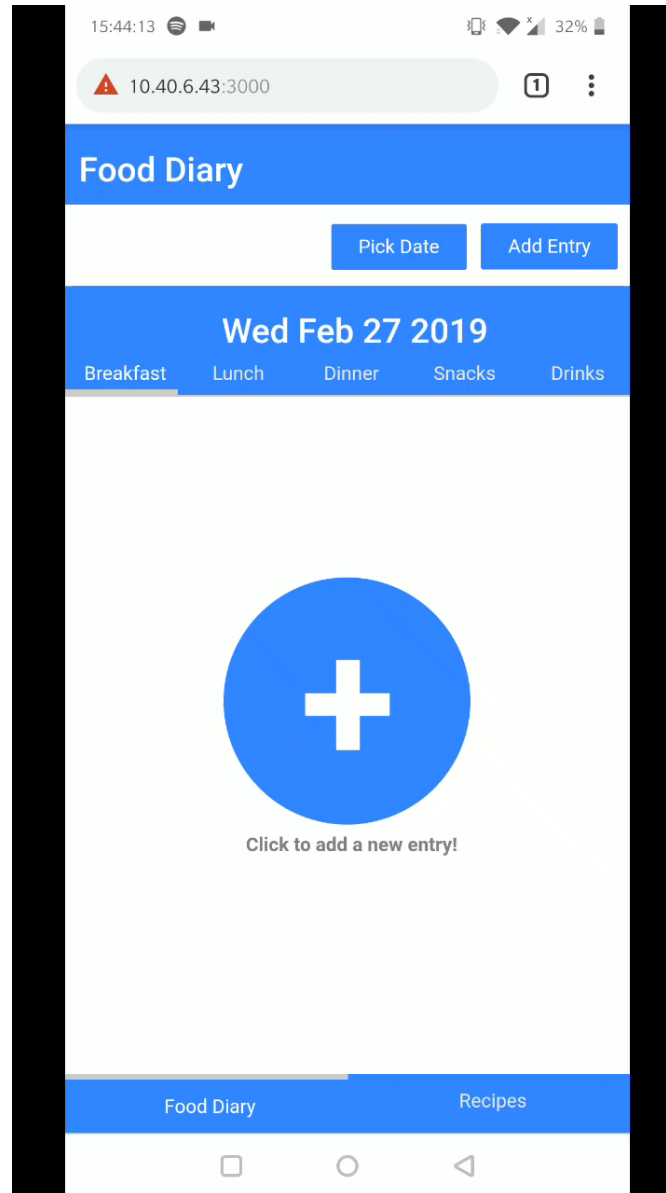

React

Progress To Date

- Implemented Functionality:
 - Add, edit, delete food diary entries
 - Upload & download photos to the server
 - Loading animation
 - Database connected to front-end
- Python/Flask API Functionality:
 - All food diary API routes implemented

Progress To Date

Issues/Blocks

- Changing the focus of the project after the Amsterdam trip.
- Application was designed to be a mobile app.
- Late change from mobile to web based application.
- Some mobile components can be a challenge to replicate.
- React learning curve

Conclusion – Next Steps

- Continue building and refining the user interface
- Focus on building the recipes portion of the application
 - Bulk of the work
- Finish building the API routes for the recipes section
- Apply some feedback from recent Austria trip – Mostly UI refinement – Work on colour scheme & usability
- Quick add for the food diary
- General bug fixing

**Thanks for listening.
Any questions?**
