Introduction

This document contains the project plan for the Social Networking App. It contains a breakdown of the development for this project. This plan will show the time allocated for each step starting 19th December 2011 and ending 20th April 2012.

Project requirements

For Android app development there are specific hardware and software requirements needed. The hardware and software requirements for this project are as follows.

Hardware

The hardware requirement for this project is a development environment. This project will be developed on my college Laptop, with testing done on a Motorola Xoom Android tablet.

Software

The software requirements for this project are:

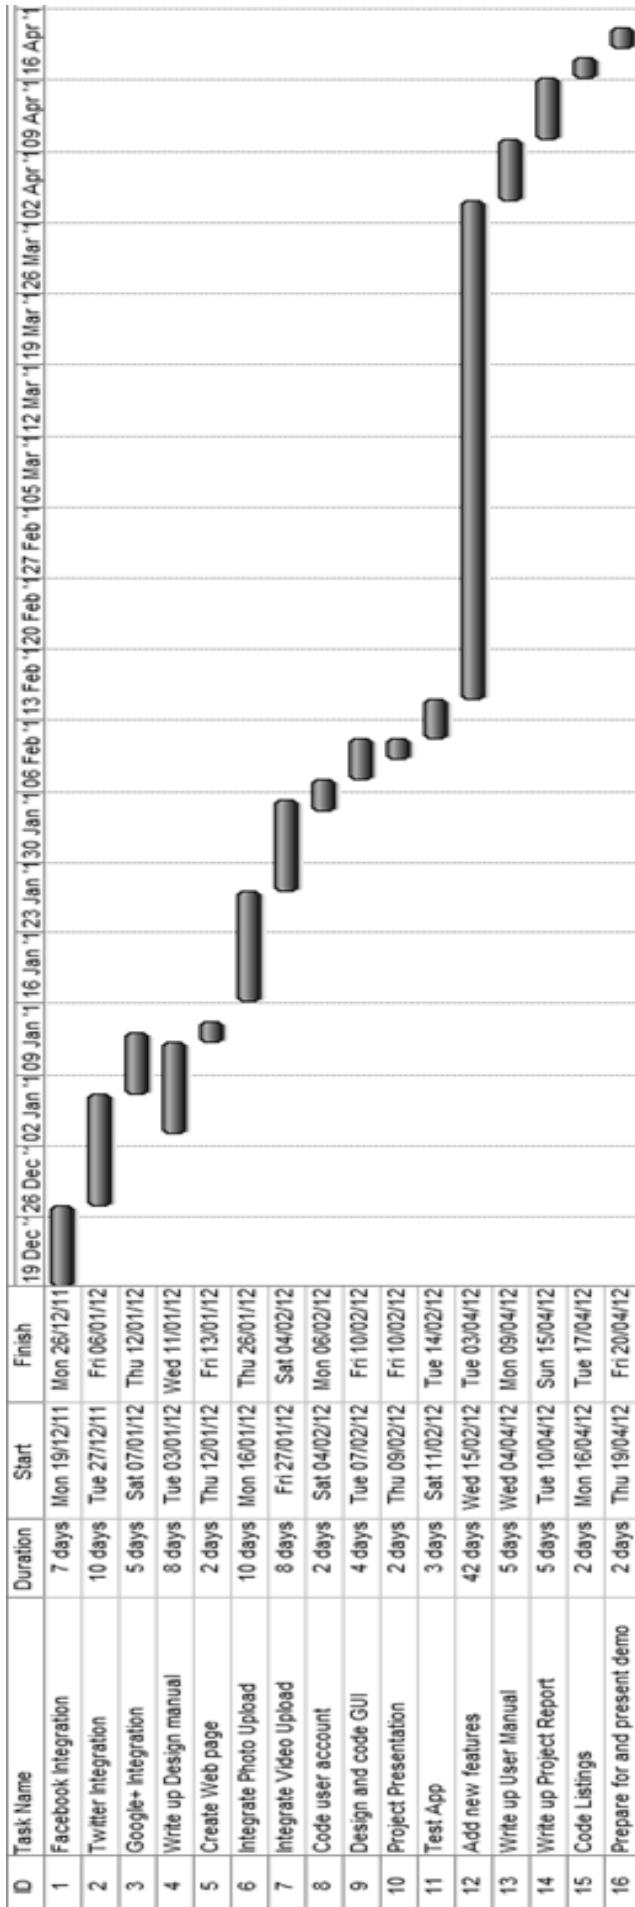

- Device running Android 3.1
- Eclipse IDE
- Social network APIs

2. Project Work Plans

Project Responsibility	Estimated Start Date	Duration Required FY05-06
Connect to Facebook and allow for news feed retrieval and status update	19/12/11	7 days
Connect to Twitter and allow for news feed retrieval and status update	27/12/11	10 days
Set up current Google+ features	7/01/12	5 days
Write up Design Manual	03/01/12	8 days
Design and create website	12/01/12	2 days
Code and test photo upload to social networks	16/01/12	10 days
Code and test video upload to social networks	27/01/12	8 days
Code and test app user account	4/02/12	2 days
Create presentation	9/02/12	2 days
Create GUI	7/02/12	4 days
Test App	11/02/12	3 days
Add New Features	15/02/12	42 days
Write up User Manual	04/04/12	5 days
Write up Project Report	9/04/12	5 days
Code Listings	16/04/12	2 days
Prepare Demo	19/04/12	2 days

2.1 Project Schedule - Gantt Chart

The Gantt chart graphically represents a project by showing each task as a horizontal bar whose length is the time needed to complete the task.

Phase Details

Develop Facebook integration

This will entail the following steps

- Create simple interface that makes a connection to Facebook
- Add ability to get and display news feeds from the users Facebook account
- Add ability to update status
- Add ability to comment on news feeds
- Testing the Facebook integration for bugs and errors

Develop Twitter integration

This will entail the following steps

- Create simple interface that makes a connection to Twitter
- Add ability to get and display Tweets from the users Twitter account
- Add ability to Tweet
- Add ability to comment on other users Tweets
- Testing the Twitter integration for bugs and errors

Develop Google+ integration

Since at the current time Google have yet to fully release their API to interact with all of the Google+ features, I will be getting the features that are currently available working in this phase.

This will entail the following steps

- Create simple interface that makes a connection to Google+
- Add ability to get and display news feeds from the users Google+ account
- Testing the Google+ integration for bugs and errors

Write up Design Manual

Write up report on how the project will be designed.

Create Webpage

Create a website that will contain details about the project.

Integrate photo uploading

During this phase I will be incorporating the ability to upload photos to the user's accounts.

Integrate video uploading

During this phase I will be incorporating the ability to upload videos to the user's accounts.

Design GUI

During this phase I will design a finalized interface for the app

Presentation

Give a presentation on work done so far on project.

Test Final App

This will be the final stage of the production of the coding of this project. The application will be tested to find any bug or error that could occur. During this phase any problems found can be fixed.

Add New Features

During this phase using the time left after the main app has been finished, I plan on creating and adding new and unique features for the app.

Write up user Manual

Creating a manual that details how to use the application. This document will show how to use every feature of the app.

Write up Project report

Write a report on the project e.g. What I did, what I learned, what I didn't get done etc.

Code Listings

This phase will be adding all of the code for the application into a document.

Prepare and present demo

Give a demo and explanation of the finished project.

Glossary

IDE - Integrated development environment, a software application that allows computer programmers to develop in.

API - application programming interface, essential tools needed to allow software to interact with other different software.

GUI – graphical user interface, a user interface that allows users to interact with electronic devices by the use of images.
